Homework #4: The Transformation Game

Date assigned: March 28th 2013

Date due: April 4th 2013

Please submit your work in the dropbox on [myCourses](#)

In this homework, you will play the [Transformation Game](#) to help you better understand how transformations work.

In the Transformation Game you must use translation, scaling, and rotation to move a house from its original position to a target position. The game has 20 levels. You should complete at least the first five levels. Submit a screenshot of the solution for the highest level you were able to solve.

Tip: As we discussed in class, rotations and scaling are done with respect to the origin.
